## SAFETY PROGRAM REQUESTS

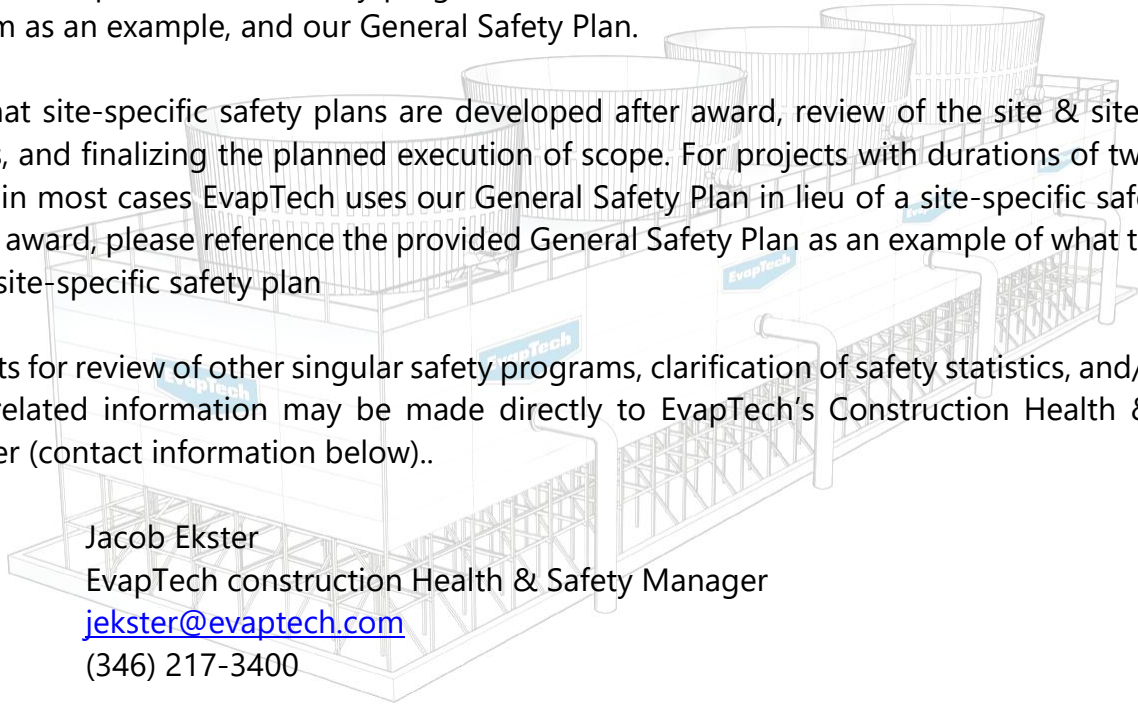

EvapTech, Inc. is a privately held corporation. EvapTech has developed & implemented an industry-leading safety program focused on meeting the expectations of our clients & protecting all employees. Due to the extensive time & effort input into this development and the proprietary nature of this information, EvapTech does not publish our safety manual. This information is considered confidential.

EvapTech has provided our safety program's table of contents, our Fall Protection & Prevention program as an example, and our General Safety Plan.

Note that site-specific safety plans are developed after award, review of the site & site-specific hazards, and finalizing the planned execution of scope. For projects with durations of two weeks or less, in most cases EvapTech uses our General Safety Plan in lieu of a site-specific safety plan. Prior to award, please reference the provided General Safety Plan as an example of what to expect from a site-specific safety plan

Requests for review of other singular safety programs, clarification of safety statistics, and/or other safety related information may be made directly to EvapTech's Construction Health & Safety Manager (contact information below)..

Jacob Ekster  
EvapTech construction Health & Safety Manager
